Artificial Intelligence

For over a decade, Hexagon has been advancing its domain specific AI capabilities beginning with machine learning in 2012. Together with our customers, research in academia, strategic and technology partners Hexagon continues to build AI to power industry-specific workflows, sensors and platforms. Hexagon AI transforms data into a differentiator turning insights into impactful actions, improving efficiency, quality, safety, and sustainability in industrial operations. We train domain specific AI models and apply foundation models, where there is value to our customers.

Hexagon's AI for your industry

At Hexagon, we build artificial intelligence in our technology to help our customers improve their business.
